- English (Professional Working Proficiency)
- Burmese Native

Objective

Analytical Technical Support Specialist and Developer with hands-on experience in enterprise SaaS/ERP troubleshooting, system configurations, and workflow automation. Proven track record in diagnosing backend edge cases, managing user tickets, and delivering technical training. Equipped with a dedicated remote setup for high-availability support.

- **Projects**
- Warehouse Management System: Designed and developed an enterprise application using Angular,Java, and JavaScript.
- Hospital Management System : Built a web-based management system using Java and Spring MVC architecture.
- Food Ordering System : Implemented core backend logic and data ordering structures using C++
- Vocational Technical Projects(Pearl Yadana): Developed multiple practical applications applying frontend,backend, and database logic for simulated enterprise environments.

- **Odoo Functional Specialist / Trainer | MMTech (2025 – 2026)**
- Managed end-to-end Odoo ERP implementation and user onboarding, ensuring successful system deployment custom-tailored for retail, manufacturing, and jewelry industries.
- Facilitated hands-on training for core functional modules, streamlining Sales processes, Procurement (Purchase) workflows, and daily POS operations.
- Educated accounting teams on Odoo Accounting & Invoicing, covering bank reconciliation, automated journal entries, and financial reporting.
- Implemented and trained staff on the Odoo Manufacturing (MRP) module, optimizing production planning, Bills of Materials (BOM) management, and manufacturing orders.
- Utilized strong project management skills to design and manage comprehensive Project Timelines (PJ Timelines), ensuring deliverables and implementations met tight deadlines.
- Developed detailed Training Outlines and structural technical documentations to support effective knowledge transfer and long-term user adaptation.
- Authored step-by-step User Manuals and standard operating procedures (SOPs) to simplify complex system workflows for non-technical users.
- Conducted system and functional Testing on core modules and DMS (Distribution Management System) Mobile Applications, identifying issues to ensure software reliability prior to go-live deployment.

- **Soft Skills**
- Optimistic mindset & Problem-Solving
- Time Management, Active Listening, Presentation Skills & Team Player

- **Work Preferences & Availability**

Fully equipped for high-availability remote operations with reliable high-speed internet, power backup, and a quiet workspace. Available for immediate onboarding with full flexibility across UK, US East Coast, and APAC time zones (including flexible weekend schedules).
